REVIEWER COMMENTS

Comment:

We have the following submission requirement that we need you to meet before we can proceed:

As your data falls under the list of data types which must be deposited (listed below), we ask that you please provide the relevant accession numbers and the name of the database in which your data is stored. If the data has not yet been deposited, please do so and provide the relevant information needed to access it in the "Data Availability" section in your manuscript. Please ensure all data is already released and that any accession numbers/web links are in the "Data Availability" in their final form, and that all web links and accessions allow access to public data. Please see here for a list of recommended repositories for each data type: http://www.springernature.com/gp/group/data-policy/repositories

Please note that Scientific Reports mandates data deposition for the following:

• Proteomics data and Protein sequences – can be deposited in Uniprot or PRIDE

• DNA and RNA sequences – can be deposited in any INSDC member repository

• Genetic polymorphisms – can be deposited in dbSNP, dbVar, clinVAR or European Variation Archive (EVA)

• Linked genotype and phenotype data – can be deposited in dbGAP or The European Genome-phenome Archive (EGA)

• Macromolecular structure – can be deposited in the Worldwide Protein Data Bank (wwPDB), the Biological Magnetic Resonance Data Bank (BMRB) or Electron Microscopy Data Bank (EMDB)

• Gene expression data - can be deposited in Gene Expression Omnibus (GEO) or ArrayExpress

• Crystallographic data for small molecules – can be deposited in Crystallography Open Database (COD)

Response:

We thank you for the comment to improve the manuscript. In accordance with the journal's data availability requirements, all relevant genetic data have now been deposited in a public repository. The raw sequencing data have been submitted to the European Nucleotide Archive (ENA) and are publicly accessible under BioProject accession PRJEB114395 (https://www.ebi.ac.uk/ena/browser/view/PRJEB114395)

The Data Availability section of the manuscript has been updated accordingly and now reads:

Data and code availability

The datasets generated and/or analyzed during the current study are publicly available. Raw sequencing data have been deposited in the European Nucleotide Archive (ENA) under BioProject accession PRJEB114395 (https://www.ebi.ac.uk/ena/browser/view/PRJEB114395). The complete dataset and reproducible analysis scripts are available in the GitHub repository (https://github.com/Flavjack/quinoa-genetics). Supplementary File 1 contains all datasets and analysis workflows used in this study.
